IMPORTANT SET OF RULES FOR PRESENTATIONS

- Make sure to make a printout, i.e. a hardcopy, of the presentation slides that you will show in class and hand it to me at the end of class with the CD.
- What we are seeking out of your presentation are simple explanations with examples of what you are talking about (not necessarily any equation that is hard to understand), for the audience benefit/understanding.
- INDULGE into application examples of the discussed materials.
- Pictures are great to explain a concept (pictures, pictures, pictures!).
- I want to see BOTH text and pictures in a typical slide (not just pictures alone).
- Next to EVERY new jargon or technical term that you present for the first time EXPLAIN in a sentence or two its definition. DO NOT leave terms unexplained in your presentation.
- Font size for text in the presentation slides should be at least 20 points.
- My advice is NOT to stick to the referenced books and seek other sources (e.g. on-line or other textbooks/reports/etc.) in making your presentation.
- Make sure you don't exceed the time limit for the presentation.
